Count of STATE

14

Count of airlines

Average of delay by month

This chart shows the average arrival and departure delays across different months. Seasonal trends, weather conditions, and holidays may contribute to variations in delays.

City Distribution

This map highlights the geographic distribution of cities.

Average of delay by AIRLINE

● Average of ARRIVAL_DELAY ● Average of DEPARTURE_DELAY

This visualization compares the average delays for different airlines. Some airlines may have better on-time performance due to fleet efficiency, airport hubs, or operational strategies.

number of cancellation by month

Displays the monthly trend of flight cancellations. Weather conditions, mechanical issues, and airline policies could influence these numbers.

number of diverted flight by month

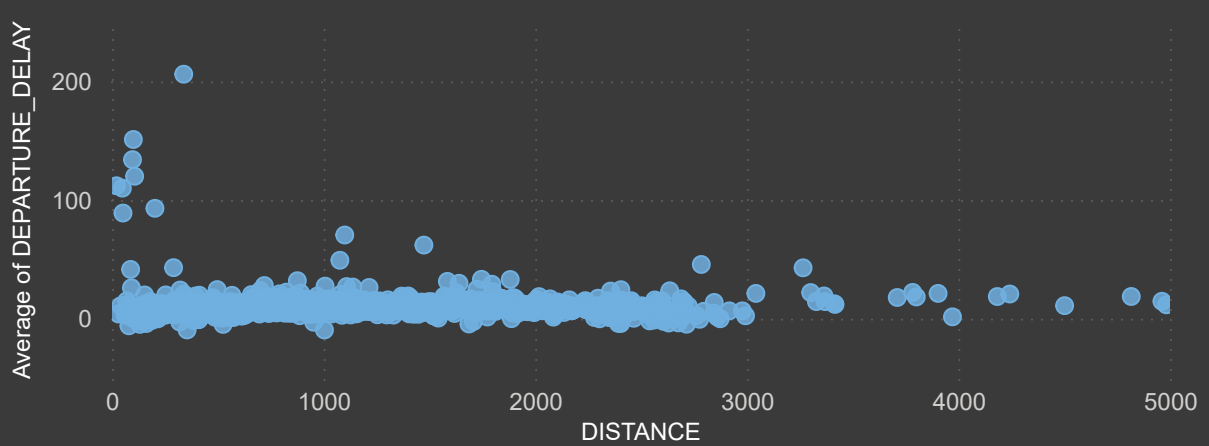

Shows how often flights are diverted each month. Diversions typically occur due to bad weather, technical issues, or airport congestion.

Average of ARRIVAL_DELAY by DISTANCE

Average of DEPARTURE_DELAY by DISTANCE

Analyzes how flight distance affects delays. Shorter flights may experience higher delays due to congestion, while longer flights might be more affected by scheduling buffers.

Average of delay by DAY_OF_WEEK

● Average of ARRIVAL_DELAY ● Average of DEPARTURE_DELAY

Examines whether certain days have higher delays. Weekends or peak business travel days might see different delay patterns.

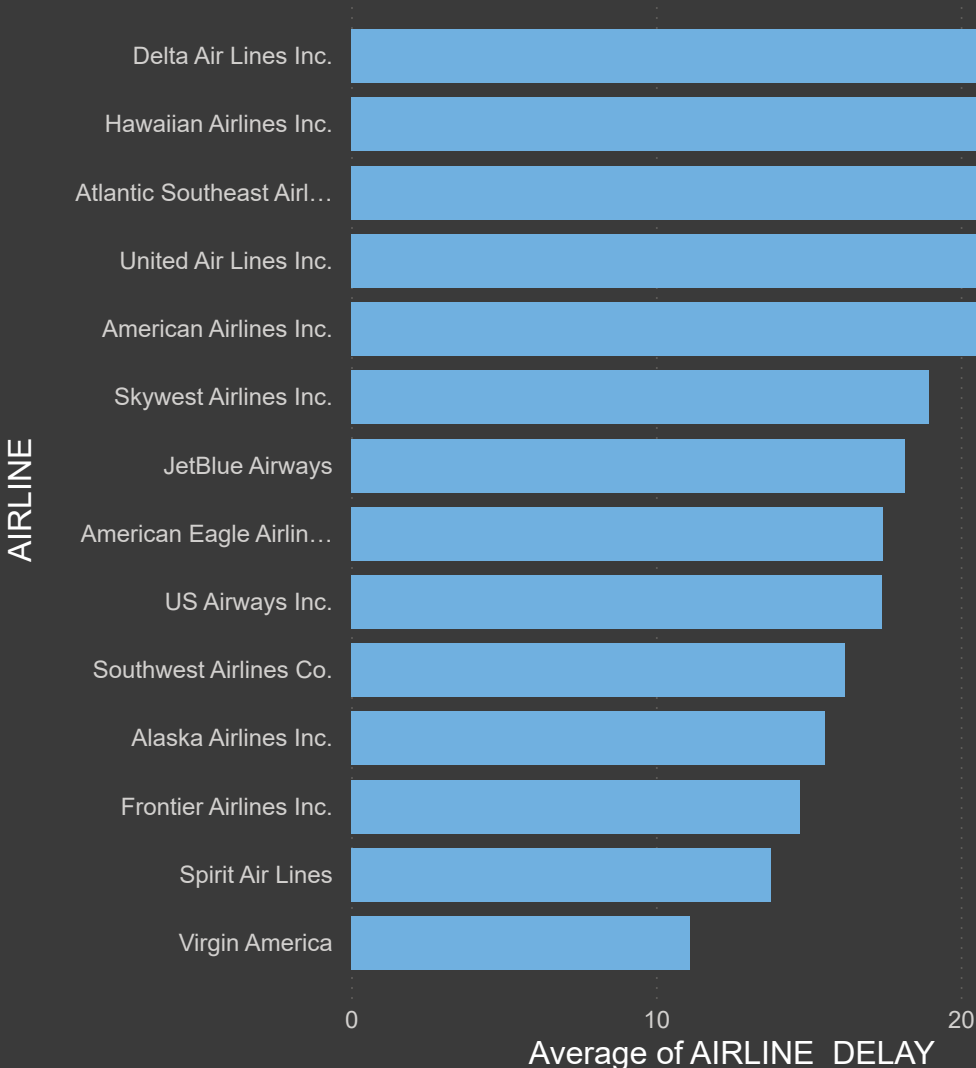

Sum of CANCELLED and Sum of DIVERTED by AIRLINE

● Sum of CANCELLED ● Sum of DIVERTED

Compares airlines based on the number of cancelled and diverted flights. Some airlines may handle disruptions better than others

Average of AIRLINE_DELAY by AIRLINE

This chart ranks airlines based on their overall flight delays. Operational efficiency and airport hubs play a role in these rankings.

Average of DELAY by ORIGIN_AIRPORT

● Average of ARRIVAL_DELAY ● Average of DEPARTURE_DELAY

This chart looks at flights from the perspective of their destination airports. Again, the horizontal axis shows different airports, while the vertical axis reflects the average delay in minutes. By comparing the bars, you can see which destinations tend to have higher or lower arrival and departure delays overall.

This chart shows how flights perform in terms of both arrival and departure delays at various origin airports. Each airport is listed along the horizontal axis, and the vertical axis displays the average delay (in minutes). Bars for arrival and departure delays allow quick comparison of how each origin airport influences flight timeliness.

Average of DELAY by DESTINATION_AIRPORT

● Average of ARRIVAL_DELAY ● Average of DEPARTURE_DELAY
